QUARTERLY ON-CHAIN HOLDER REPORT

How RBNT holders moved in Q3 2026

A calm, sourced picture of accumulation, selling, staking and concentration on Redbelly mainnet, from 1 July to 30 September 2026. Every figure is read from the chain.

Period 1 July to 30 September 2026, UTC Opening block 3,025,809 Closing block 3,209,414

Data read 2026-10-27

HOLDERS

53,727

+0.3% since 1 July

RBNT STAKED

751.3M

+18.2% since 1 July

LARGEST 10 HOLD

59.1%

-1.6 points, outside named wallets

RESERVED WALLETS

5.93B

-0.7% since 1 July

THE QUARTER IN BRIEF

What happened, in plain words

Each point links to the chart and the numbers behind it. Trends are described as they happened on chain. Nothing here predicts prices or suggests buying or selling.

01

Holder count edged up 0.3%

53,727 addresses held at least 1 RBNT on 30 September, against 53,567 on 1 July, a change of +160. Wrapped and staked RBNT count toward the address that owns it.

See the numbers

02

Holdings stay highly concentrated

Half of the RBNT outside the named wallets sits with 6 holders. The largest 10 held **59.1%** of it on 30 September, against 60.7% on 1 July. 6 of those 10 are smart contracts. Among regular wallets only, the largest 10 held 48.4%, against 47.5%.

See the numbers

03

The largest 10 reduced, ranks 11 to 100 added

Of the 10 largest holders on 1 July, 6 reduced their holdings by more than 1% and 1 added. Together they ended with 120.1 million RBNT less (-4.9%). Ranks 11 to 100: 41 added, 12 reduced, +1.8% combined.

See the numbers

04

More RBNT staked, by slightly fewer wallets

Staked RBNT in the two Reddex pools rose 18.2% to **751.3 million**, while wallets with a stake went from 1,268 to 1,255. The pools paid 14.8 million RBNT in rewards and received 15 million RBNT of reward funding.

See the numbers

05

Reserved wallets: mostly moves between themselves

786.4 million RBNT moved between the nine reserved wallets during the quarter. 43.8 million RBNT left the group, all of it from Ecosystem (Unlocked). The group held **5.93 billion** RBNT on 30 September, against 5.97 billion on 1 July.

See the numbers

06

WRBNT supply fell 4.5%

120.8 million RBNT was unwrapped and 38.7 million wrapped during the quarter, leaving **1.74 billion** RBNT as WRBNT. The WRBNT contract held enough RBNT to back every WRBNT at every snapshot.

See the numbers

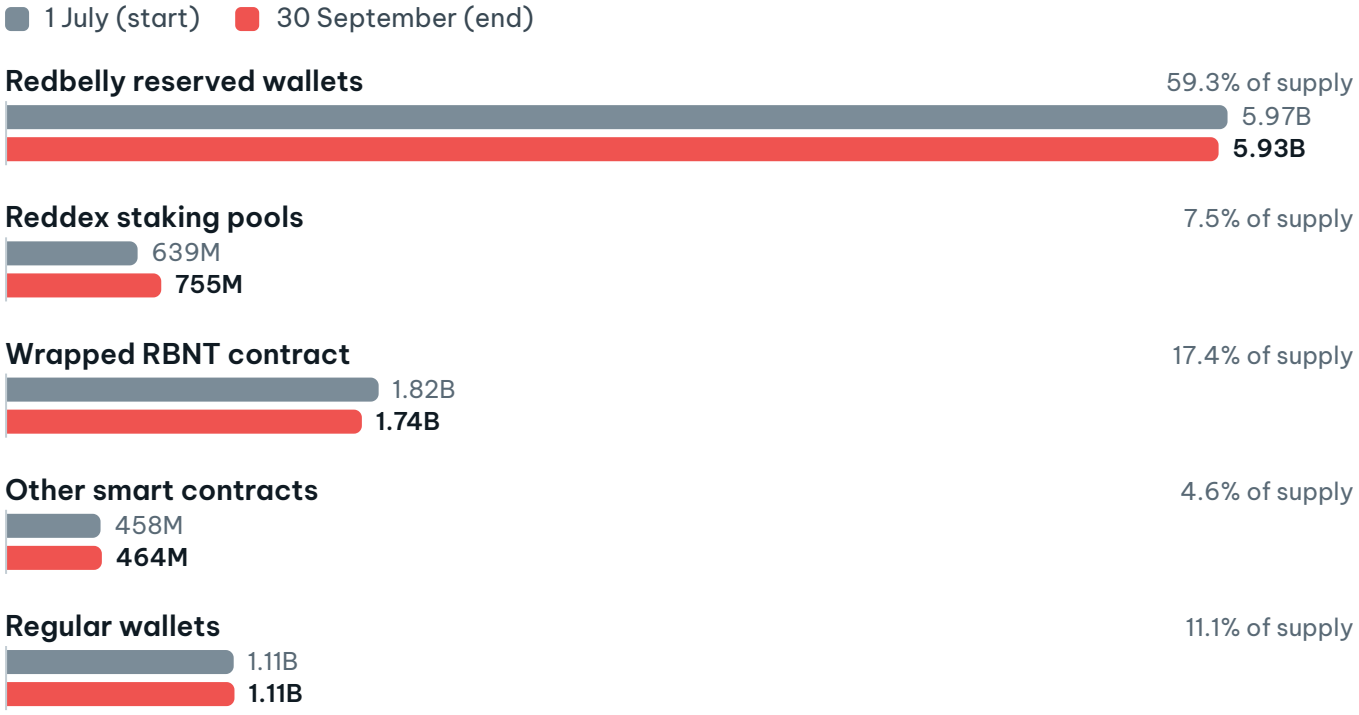

SUPPLY MAP

Where RBNT sits

Every RBNT sits at exactly one address. This view sorts all 9,999,963,159 RBNT found on chain by the type of address holding it at the end of the quarter, next to the start.

RBNT by type of address

Start and end of the quarter. Bars use the same scale.

RBNT by type of address

TYPE	WHAT IT IS	1 JULY	30 SEPTEMBER	CHANGE	SHARE AT END
Redbelly reserved wallets	The nine wallets listed on the DAO treasury page.	5,974,773,423	5,930,961,030	-43,812,393	59.3%
Reddex staking pools	Stakes plus reward funds in the two RBNT pools.	639,062,323	754,776,552	+115,714,229	7.5%
Wrapped RBNT contract	RBNT locked to back WRBNT one to one.	1,819,066,451	1,736,902,022	-82,164,429	17.4%
Labelled exchange wallets	Exchange wallets labelled on Routescan.	0	0	0	0.0%
Other smart contracts	Programs on the chain that hold RBNT. Not labelled.	457,621,791	464,053,740	+6,431,949	4.6%
Regular wallets	Wallets controlled by a private key. Not labelled.	1,109,439,182	1,113,269,814	+3,830,632	11.1%
All balances found	**Of 10,000,000,000 RBNT created at launch**	**9,999,963,171**	**9,999,963,159**	**-11**	**100.0%**

Source: eth_getBalance at blocks 3,025,809 and 3,209,414

WHAT THIS MEANS

Think of this chart as a list of places where RBNT is parked. On 30 September, **59.3%** sat in Redbelly's nine reserved wallets, 17.4% inside the WRBNT contract and 7.5% in the two staking pools. Regular wallets held 11.1% and other smart contracts 4.6%.

The WRBNT contract is one row here because it physically holds that RBNT. Everywhere else in the report the same RBNT is counted with whoever holds the WRBNT, so it is never counted twice. The rows add up to 9,999,963,159 RBNT, which is all but 36,841 RBNT (0.0004%) of the 10 billion created at launch. The method note explains the small remainder.

DISTRIBUTION

How spread out holdings are

Holder counts and shares in this section leave out the 12 named wallets and count wrapped and staked RBNT toward the address that owns it. That leaves 4.07 billion RBNT, or 40.7% of all RBNT, spread across 53,727 holders at the end of the quarter.

Held by the largest 10 holders

59.1%

Was 60.7% on 1 July (-1.6 points)

Largest 10 regular wallets only

48.4%

Was 47.5% on 1 July (+1.0 points)

Held by the largest 100 holders

87.0%

Was 87.4% on 1 July (-0.4 points)

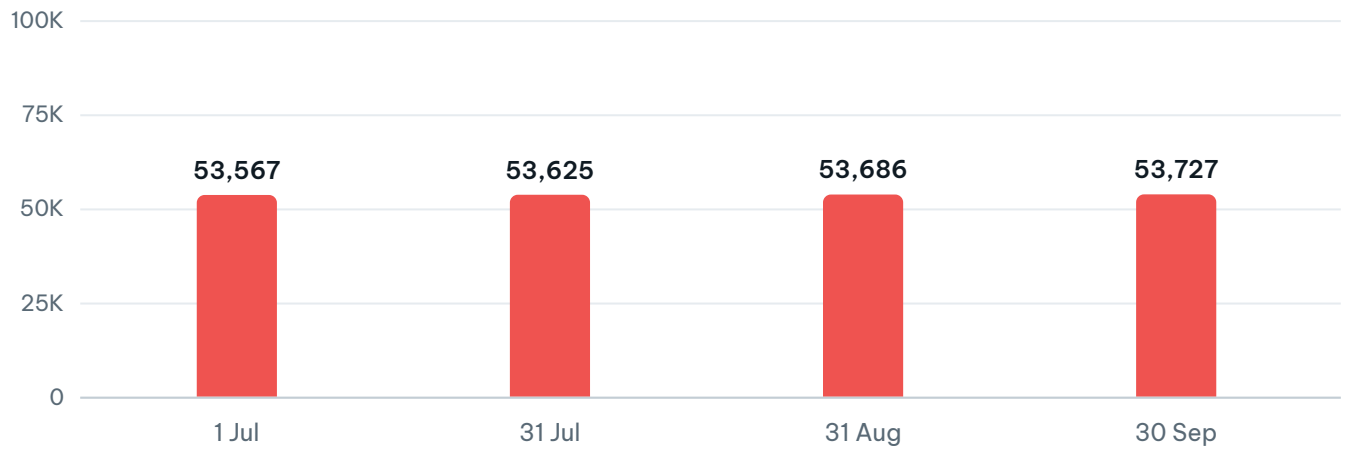

Holders that together hold half

6

Was 6 on 1 July

Holders with at least 1 RBNT

Wallets and contracts, counting wrapped and staked RBNT. Named wallets left out.

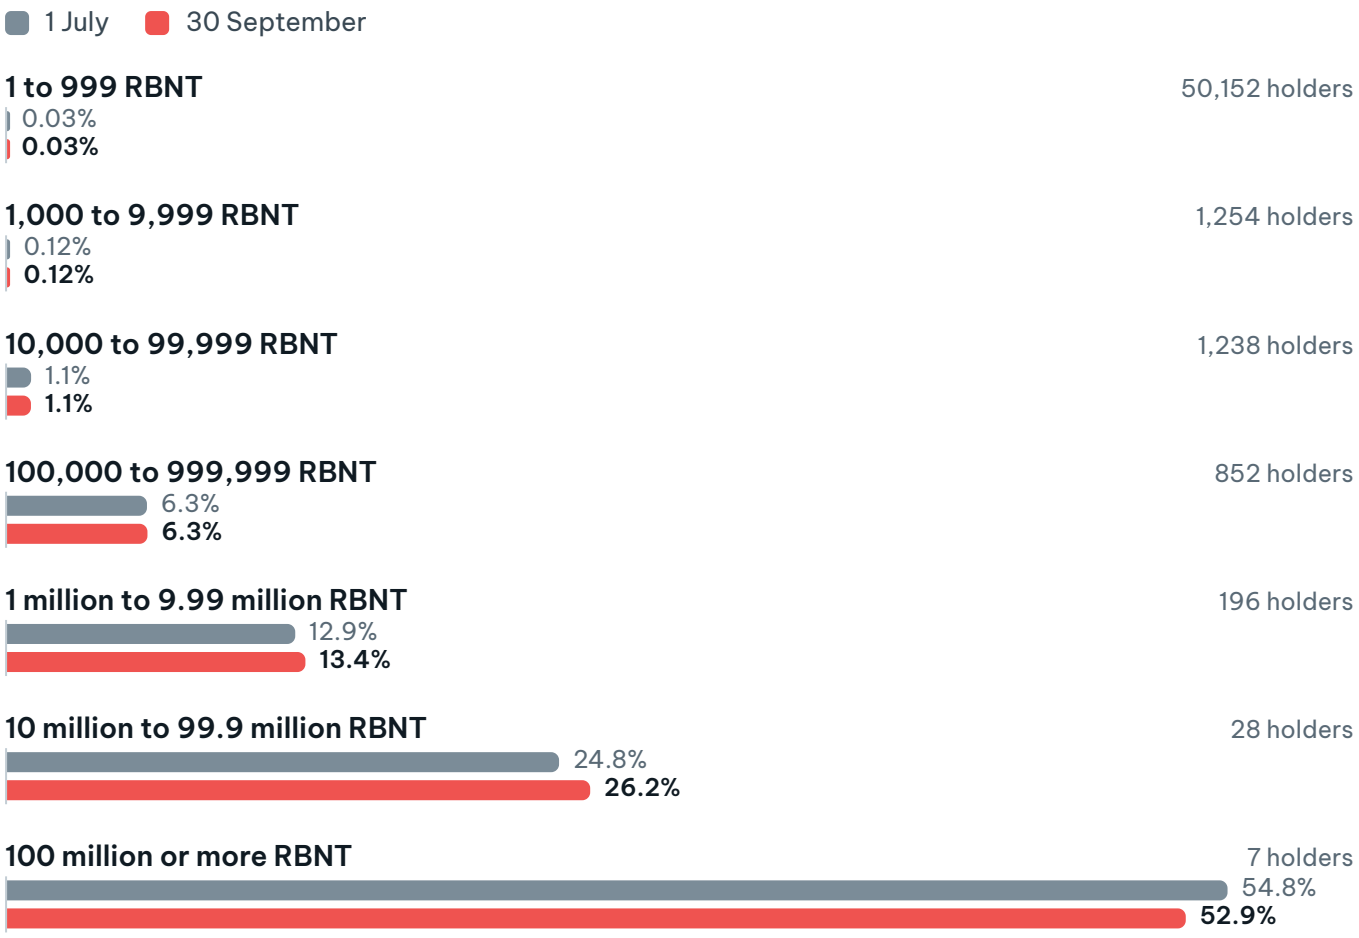

Holder counts at each snapshot

SNAPSHOT	BLOCK	HOLDERS WITH 1 RBNT OR MORE	ADDRESSES WITH LESS THAN 1 RBNT
start of 1 July	3,025,809	53,567	111,422
end of 31 July	3,104,242	53,625	111,454
end of 31 August	3,161,410	53,686	111,482
end of 30 September	3,209,414	53,727	111,536

Share of RBNT by balance size

Holders grouped by how much they hold. Bars show each group's share of the RBNT outside named wallets.

Holders and RBNT by balance band. RBNT per band on 1 July is in 02_holders_by_balance_band.csv.

BAND (RBNT)	HOLDERS 1 JUL	HOLDERS 30 SEP	SHARE 1 JUL	SHARE 30 SEP	RBNT 30 SEP
1 to 999	50,026	50,152	0.03%	0.03%	1,268,089
1,000 to 9,999	1,222	1,254	0.12%	0.12%	4,979,596
10,000 to 99,999	1,237	1,238	1.1%	1.1%	43,560,469
100,000 to 999,999	857	852	6.3%	6.3%	256,192,529
1 million to 9.99 million	193	196	12.9%	13.4%	544,420,573
10 million to 99.9 million	25	28	24.8%	26.2%	1,064,093,634
100 million or more	7	7	54.8%	52.9%	2,150,909,447

Source: balances at blocks 3,025,809 and 3,209,414

WHAT THIS MEANS

Most holders hold small amounts and a few hold large ones. At the end of the quarter 50,152 holders had between 1 and 999 RBNT, together 0.03% of it, while the 7 holders with 100 million or more held **52.9%**.

The largest 10 holders' share went from 60.7% to 59.1%. 6 of them are smart contracts, not regular wallets. Counting regular wallets only, the largest 10 held 48.4% at the end against 47.5% at the start. One address is not always one person: a contract or an exchange can hold RBNT for many people, and one person can use many addresses.

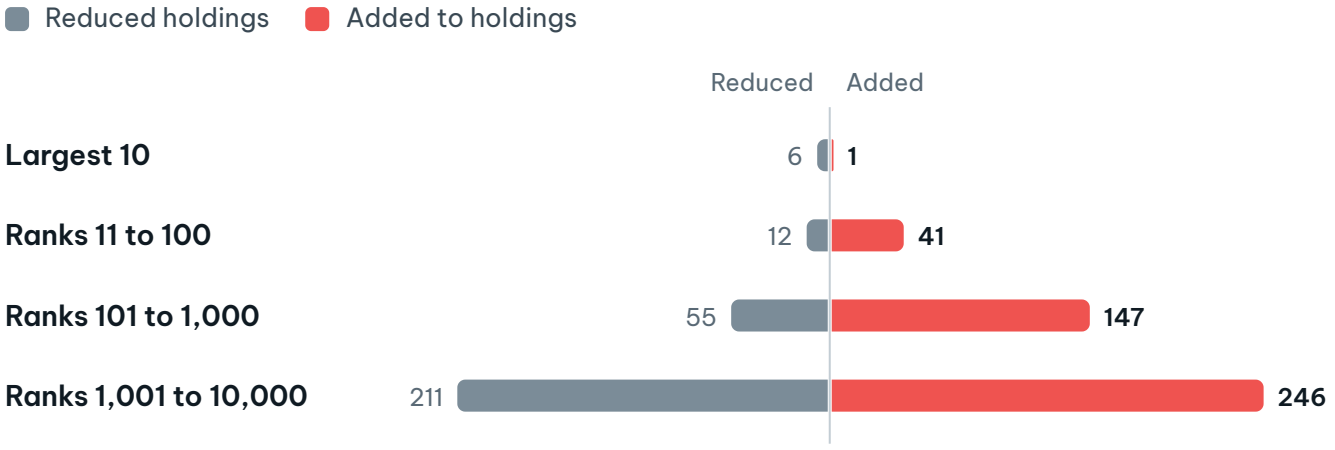

ACCUMULATION AND SELLING

What the largest holders did

Holders are ranked by what they held on 1 July and kept in that group for the whole quarter. Each group shows how many added to their holdings, how many reduced them, and the net result. Only groups are shown, never single wallets.

How many added and how many reduced

Holders grouped by rank on 1 July. A move of more than 1% counts.

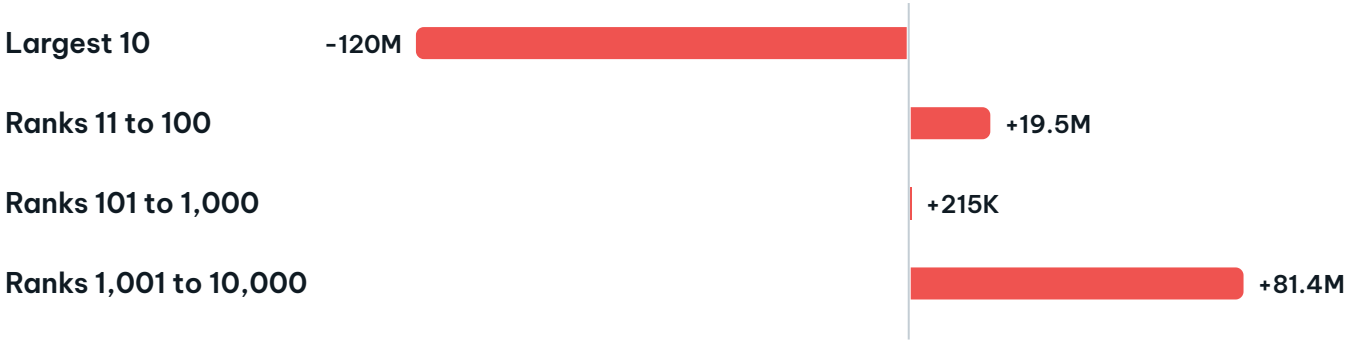

Largest holders, grouped by rank on 1 July

GROUP	HOLDERS	ADDED MORE THAN 1%	REDUCED MORE THAN 1%	STEADY	EMPTIED	SMART CONTRACTS IN GROUP
Largest 10	10	1	6	3	0	6
Ranks 11 to 100	90	41	12	37	2	13
Ranks 101 to 1,000	900	147	55	698	12	43
Ranks 1,001 to 10,000	9,000	246	211	8,543	27	81

Source: holdings at blocks 3,025,809 and 3,209,414

Net change in what each group holds

Combined holdings on 30 September minus 1 July, in RBNT.

Combined holdings by group

What it took to be in the largest 1,000

112K RBNT

On 30 September. It was 112K RBNT on 1 July.

Holdings of the newcomers on 30 September

144M RBNT

They held 1.5M RBNT on 1 July

WHAT THIS MEANS

Added means the address held more than 1% more at the end of the quarter than at the start. **Reduced** means more than 1% less. A reduction can be a sale, but it can also be a move to another wallet, a payment, or a deposit to an exchange. The chain shows the movement, not the reason. Staking or wrapping RBNT does not count as reducing, because the report follows staked and wrapped RBNT back to its owner.

Big group totals can come from a few addresses. In the ranks 1,001 to 10,000 group, three addresses account for 94% of its 81.4 million RBNT increase.

46 addresses entered the largest 1,000 during the quarter, and 20 of them held less than 1 RBNT on 1 July.

REDDEX STAKING POOLS

Staking

Reddex runs two RBNT staking pools: one with no lock and one with a 365 day lock. Each pool holds the RBNT people staked plus RBNT set aside to pay rewards, so the charts split the two using the pool's own totalStake() figure.

RBNT staked in both pools

751M

Reddex RBNT staking pool, 365 day lock	Ecosystem (Unlocked)	10,000,000

Source: pool event logs between blocks 3,025,809 and 3,209,414

WHAT THIS MEANS

Staked RBNT across both pools went from 635.8 million to **751.3 million**. During the quarter 489 stakes added 196.4 million RBNT and 153 unstakes took out 80.9 million. Wallets with a stake went from 1,268 to 1,255, so the average stake grew.

Pool balances also include reward funds: RBNT kept to pay stakers, which stakers do not own. Stakers claimed 14.8 million RBNT of rewards in the quarter, and Ecosystem (Unlocked) added 15 million RBNT of reward funding. Reward funds stood at 3.5 million RBNT on 30 September.

PUBLICLY NAMED WALLETS

Reserved wallets, WRBNT and exchanges

These are the only wallets this report names, because they are already public. Balances are read from the chain. The DAO treasury page lists the original allocations, which are shown for comparison.

Redbelly reserved wallets

Balances read from the chain. The treasury page lists original allocations, not balances.

Exchange wallets

Routescan showed no public name tag on any of the 30 largest holders outside the named wallets when they were checked on 2026-10-27. Routescan does tag Redbelly's own wallets, for example Redbelly Network: Wrapped RBNT, so the check works, but no exchange wallet is labelled on Redbelly mainnet yet. Exchange flows are therefore not reported for this quarter. When an exchange is labelled, the next edition adds it with one setting in the scripts.

Source: Routescan address labels, checked on 2026-10-27

WHAT THIS MEANS

Most reserved wallet activity was between the reserved wallets themselves: 33.3 million from Governance (Locked) to Governance (Unlocked), 500 million from Ecosystem (Locked) to Ecosystem 2 (Unlocked) and 253.1 million from Ecosystem 2 (Unlocked) to Investors. The 43.8 million RBNT that left the group came from Ecosystem (Unlocked): 25.1 million to the WRBNT contract (wrapping it), 10 million to the 365 day lock staking pool, 5 million to the no lock staking pool and 3.7 million to other addresses. In WRBNT, reserved wallets sent 34.7 million to addresses that are not named and received 9.6 million from them.

WRBNT was fully backed at every snapshot: the contract held as much RBNT as there was WRBNT. 94.6% of all WRBNT sat in smart contracts rather than regular wallets on 30 September.

CONTEXT

Network activity in the quarter

Background figures that help read the holder trends above.

Transactions in the quarter

256,844

Between blocks 3,025,810 and 3,209,414

Addresses that sent a transaction

1,071

Counted once each

RBNT paid in network fees

1,999,924

The protocol pays fees back out to network participants instead of burning them, so total RBNT changed by only 11.34 RBNT

METHOD AND SOURCES

How this report was made

The full method, with every script, is in METHOD.md. Anyone can rerun it for the next quarter by changing one setting.

1 **Pick the snapshot blocks.** The last block before 1 July 00:00 UTC, the last block of each month, and the last block before 1 October 00:00 UTC. Found by binary search on block times and matched against Routescan.

2 **List every address that could hold RBNT.** A full scan of all 3.2 million blocks for senders and receivers, plus contracts created, internal transfers, WRBNT and staking events, the named wallets and Routescan's holder list.

3 **Read every balance from the chain.** RBNT balance, WRBNT balance and staked RBNT for each address at each snapshot block, straight from the Redbelly RPC.

4 **Count each RBNT once.** WRBNT and staked RBNT are moved to the holder who owns them. The WRBNT contract and the pools keep only what is not owed to anyone.

5 **Group, never single out.** Only publicly named wallets appear by name. Everything else is reported as totals for groups.

6 **Check before publishing.** All balances must add up to the 10 billion RBNT created at launch, WRBNT and staking totals must match their contracts, and reserved wallet transfers must explain their balance changes to the last RBNT.

Verification checks

Run by the scripts every time the data is rebuilt. All must pass before publishing.

CHECK	RESULT	DETAIL
All balances found add up to the 10 billion genesis supply	● PASSED	Block 0 held exactly 10,000,000,000 RBNT. The balances found add up to 9,999,963,171 RBNT at the start and 9,999,963,159 at the end. The other 0.0004% (36,841 RBNT) could not be placed, most likely at addresses the protocol paid directly that never appear in a transaction (METHOD.md, section 10). Pass level: under 0.001%.
Total supply held steady through the quarter	● PASSED	Sum of all balances changed by -11.34 RBNT while 1,999,924 RBNT was paid in network fees, so the fees were paid back out to network participants, not burned. Pass level: change under 1% of fees paid.
Snapshot block for 2026-07-01 00:00:00 UTC matches Routescan	● PASSED	RPC binary search block 3,025,809; Routescan getblocknobytime 3,025,809.
Snapshot block for 2026-08-01 00:00:00 UTC matches Routescan	● PASSED	RPC binary search block 3,104,242; Routescan getblocknobytime 3,104,242.
Snapshot block for 2026-09-01 00:00:00 UTC matches Routescan	● PASSED	RPC binary search block 3,161,410; Routescan getblocknobytime 3,161,410.
Snapshot block for 2026-10-01 00:00:00 UTC matches Routescan	● PASSED	RPC binary search block 3,209,414; Routescan getblocknobytime 3,209,414.
WRBNT balances add up to WRBNT total supply	● PASSED	At every snapshot, the WRBNT held by all addresses equals totalSupply() of the contract. 1 Jul: 1,819,066,451, 1 Aug: 1,805,084,452, 1 Sep: 1,724,810,603, 1 Oct: 1,736,902,022
WRBNT is fully backed by RBNT	● PASSED	RBNT held by the WRBNT contract at close 1,736,902,022; WRBNT held by all addresses 1,736,902,022.
Staker positions add up to totalStake (Reddex RBNT staking pool, no lock)	● PASSED	Sum of userInfo(amount) at close 440,677,250; totalStake() 440,677,250.
Staker positions add up to totalStake (Reddex RBNT staking pool, 365 day lock)	● PASSED	Sum of userInfo(amount) at close 310,573,758; totalStake() 310,573,758.
Holdings view counts every RBNT once	● PASSED	After moving WRBNT and staked RBNT to their holders, the total still equals total supply at every snapshot.
WRBNT events explain WRBNT supply	● PASSED	All wraps minus all unwraps up to the closing block 1,736,902,022; totalSupply() 1,736,902,022.
Transfers explain the balance change (Team (Locked))	● PASSED	RBNT: start 333,909,314 + in 0 - out 0 = end 333,909,314; unexplained 0.0. WRBNT: start 0, end 0, unexplained 0.0.
Transfers explain the balance change (Governance (Locked))	● PASSED	RBNT: start 133,333,334 + in 0 - out 33,333,333 = end 100,000,001; unexplained 0.0. WRBNT: start 0, end 0, unexplained 0.0.
Transfers explain the balance change	● PASSED	RBNT: start 66,666,756 + in 33,333,333 - out 0 = end 100,000,089; unexplained 0.0. WRBNT: start 0, end 0, unexplained 0.0.

CHECK	RESULT	DETAIL
(Governance (Unlocked))		
Transfers explain the balance change (USYD/CSIRO (Locked))	PASSED	RBNT: start 200,000,000 + in 0 − out 0 = end 200,000,000; unexplained 0.0. WRBNT: start 0, end 0, unexplained 0.0.
Transfers explain the balance change (Investors)	PASSED	RBNT: start 0 + in 253,115,670 − out 0 = end 253,115,670; unexplained 0.0. WRBNT: start 0, end 0, unexplained 0.0.
Transfers explain the balance change (Reserve)	PASSED	RBNT: start 2,000,000,000 + in 0 − out 0 = end 2,000,000,000; unexplained 0.0. WRBNT: start 0, end 0, unexplained 0.0.
Transfers explain the balance change (Ecosystem (Locked))	PASSED	RBNT: start 2,794,132,788 + in 0 − out 500,000,000 = end 2,294,132,788; unexplained 0.0. WRBNT: start 0, end 0, unexplained 0.0.
Transfers explain the balance change (Ecosystem 2 (Unlocked))	PASSED	RBNT: start 377,838,567 + in 500,000,000 − out 253,115,670 = end 624,722,897; unexplained 0.0. WRBNT: start 0, end 0, unexplained 0.0.
Transfers explain the balance change (Ecosystem (Unlocked))	PASSED	RBNT: start 68,892,664 + in 0 − out 43,796,669 − network fees 15,724.23 (118 transactions) = end 25,080,271; unexplained 0.0. WRBNT: start 35,938, end 28,257, unexplained 0.0.
Stake and unstake events explain totalStake (Reddex RBNT staking pool, no lock)	PASSED	All stakes minus all unstakes up to close 440,677,250; totalStake() 440,677,250.
Stake and unstake events explain totalStake (Reddex RBNT staking pool, 365 day lock)	PASSED	All stakes minus all unstakes up to close 310,573,758; totalStake() 310,573,758.

Sources and snapshot blocks

Where each figure comes from and the exact chain state it describes.

SNAPSHOT	STATE AT	BLOCK	BLOCK TIME
Start of 1 July	2026-07-01 00:00:00 UTC	3,025,809	2026-06-30 23:57:19 UTC
End of 31 July	2026-08-01 00:00:00 UTC	3,104,242	2026-07-31 23:58:45 UTC
End of 31 August	2026-09-01 00:00:00 UTC	3,161,410	2026-08-31 23:57:49 UTC
End of 30 September	2026-10-01 00:00:00 UTC	3,209,414	2026-09-30 23:57:35 UTC

- Balances and contract reads: Redbelly mainnet RPC, chain ID 151, `governors.mainnet.redbelly.network`
- Internal transfers, event logs, block by time and contract source: Routescan Etherscan-compatible API
- Reserved wallet names, addresses and allocations: DAO treasury page
- Staking pool logic: verified ReddexRBNTLockStaker source on Routescan (`totalStake()`, `userInfo()`, Stake and Unstake events)
- Wrapped RBNT: verified WRBNT source on Routescan (`totalSupply()`, `balanceOf()`, Deposit and Withdrawal events)

NEW TO CRYPTO

Words used in this report

Short definitions, in the order you will meet them.

RBNT

The native coin of the Redbelly Network. It pays network fees and can be staked.

Wallet or address

An account on the chain, written as a long code starting with 0x. Anyone can see its balance. The chain does not say who owns it.

Holder

In this report, an address with at least 1 RBNT, counting wrapped and staked RBNT.

Block and snapshot

The chain adds transactions in blocks. A snapshot is the state of every balance right after one chosen block.

Smart contract

A program that lives on the chain and can hold RBNT, for example a trading pool or a staking pool.

Wrapped RBNT (WRBNT)

RBNT turned into a token so apps can use it. Each WRBNT is backed by one RBNT held in the WRBNT contract, and can be turned back at any time.

Staking

Locking RBNT in a pool to earn rewards. Reddex runs two RBNT pools: one with no lock and one with a 365 day lock.

Reward funds

RBNT a staking pool holds to pay rewards. It is the pool balance minus what holders staked.

Reserved wallets

The nine wallets Redbelly lists on the DAO treasury page, for example Team, Investors, Reserve and Ecosystem.

Labelled wallet

An address the explorer has publicly tagged, such as an exchange. Only labelled and treasury wallets are named in this report.

Network fees

Every transaction pays a small fee in RBNT. At today's activity levels Redbelly pays these fees back out to network participants instead of burning them, so the total amount of RBNT stays the same.

Concentration

How much of the RBNT sits with the largest holders. Higher concentration means fewer addresses hold more of it.

DOWNLOADS

Report, summary and data

Everything below is free to share. The data files list totals for groups of wallets, never single unlabelled wallets.

PDF **Full report**

The complete report with charts and tables, A4.

MD **Community summary**

An X thread and a short version in paragraphs, ready to share.

XLSX **Data workbook**

Every table behind the charts, plus a sources sheet.

ZIP

Data as CSV

Ten CSV files, one per chart or table.

MD

Method and sources

How every figure was made, and how to make the next edition.

JSON

Report data

All figures in one machine readable file, with snapshot blocks.

REDBELLY HOLDER

RBNT Quarterly On-Chain Holder Report, Q3 2026. Prepared for the Redbelly DAO Community Task Board.

Data last verified 2026-10-27 08:58 UTC against Redbelly mainnet (chain ID 151). Snapshot blocks 3,025,809 to 3,209,414.

This report describes past on-chain activity only. It is not financial advice and makes no prediction about prices.
